

# NAKIOCOIN (NAK)

## Official Whitepaper

### 1. Introduction

NAKIOCOIN (NAK) is a digital token created on the Ethereum network with the goal of establishing a solid presence in the blockchain ecosystem. It enables integration with wallets, decentralized exchanges, and Web3 applications.

### 2. Project Vision

The project aims for simplicity, transparency, and compatibility with widely adopted standards in the crypto market. It prioritizes a stable technical foundation open for future evolution.

### 3. Technical Specifications

- **Name: NAKIOCOIN**
- **Symbol: NAK**
- **Standard: ERC-20**
- **Network: Ethereum**
- **Decimals: 18**
- **Total Supply: 555,555,555 NAK**

#### **4. Tokenomics**

The total supply was defined at the time of contract creation, with no additional issuance possible. The token does not include transfer fees.

#### **5. Token Use**

**NAK can be used for:**

- **Trading on decentralized exchanges (DEX)**
- **Integration with compatible wallets**
- **Participation in future Web3 applications**

#### **6. Transparency**

The smart contract is publicly available on the Ethereum blockchain explorer, allowing anyone to audit and verify it.

#### **7. Legal Disclaimer**

**NAKIOCOIN does not guarantee financial returns. This project does not constitute an investment offer. Users are fully responsible for their own decisions.**

## 8. Current Project Status

- Institutional website ready
- Contract section with copy and Etherscan link
- MetaMask integration
- Whitepaper finalized
- Visual identity applied

## 9. Notes for Investors

This document is designed to provide clarity and transparency about the NAKIOCOIN project. It should be used for informational purposes only and not as financial advice.
